ENROLLMENTS AND DEGREES

The decade of the 1990s is establishing itself as one that is dedicated to analyzing, comparing and correcting the science education offered in our schools. Although much of this attention will be focused on the secondary schools, there is also increasing interest at the collegiate level. For the past thirty years the survey of Enrollments and Degrees has monitored the number of physics students whose interest in this discipline ranged from enrolling in a non-mathematical introductory physics course as an elective, to completing a doctoral dissertation in one of the physics subfields.

This report provides detailed information on physics enrollments for the academic year 1990-91 as well as on degree recipients in the class of 1990. Comparable astronomy data began to be collected in the mid 1970s and the most recent enrollment and degree information is summarized in the last table of this report. To be able to evaluate changes, we present six tables showing ten-year trends of physics or astronomy data. All the information is collected annually from the physics and astronomy departments.

By classifying all institutions according to their highest physics degree programs offered, we call attention to the uneven distribution of physics students among the degree-granting departments. The three categories are doctoral, master's and bachelor's granting institutions, and **Table I** lists the numbers in each category for the most recent five-year period. Each year, changes in degree programs among the institutions take place that, in 1990-91, included the discontinuance of bachelor's programs that had been on the books for several years. Five institutions have two doctorate-granting physics departments, and the footnote of **Table I** identifies them.

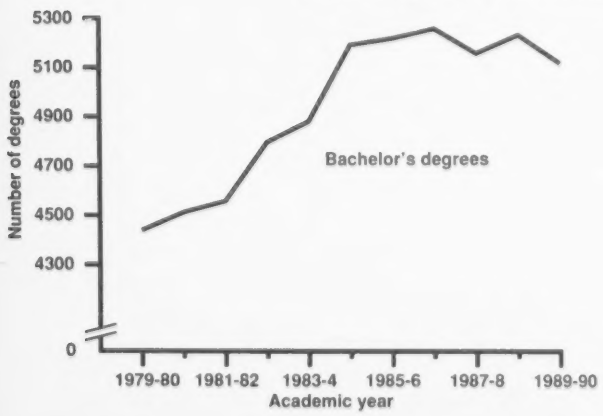
Table I. Institutions by highest physics degree offered, 1986 to 1991.

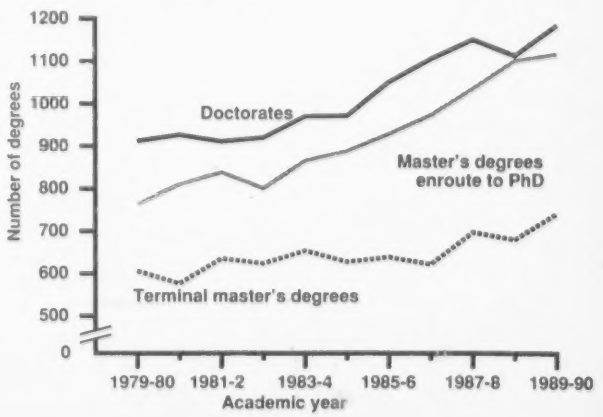
Academic year	Doctoral-granting*	Master's-granting	Bachelor's-granting
1986–87	168	90	496
1987–88	169	90	498
1988–89	169	89	496
1989–90	171	86	496
1990–91	172	84	491

**Five of these institutions have two physics doctorate-granting departments. They are Stanford U., U. of CA-Davis, Yale U., Harvard U. and Cornell U.*

A comprehensive picture of the physics degrees granted since 1979 is presented in **Figure I**. By making a distinction between a terminal master's degree and one granted enroute to a higher physics degree, we are presenting four trends for the three levels of physics degrees. Both doctorates and terminal master's degrees indicate distinct increases for the most recent year while bachelor's degrees continue their leveling trend.

Figure I. Physics degrees awarded by academic year, 1979 to 1990.





Member Societies: The American Physical Society • Optical Society of America • Acoustical Society of America • The Society of Rheology • American Association of Physics Teachers
American Crystallographic Association • American Astronomical Society • American Association of Physicists in Medicine • American Vacuum Society • American Geophysical Union

1990–91				6445	6031	14 065	3278

**Includes part-time students.*

For **Table II** we combine the two types of master's degrees when we present the numerical data for **Figure I** and add the undergraduate and graduate physics enrollments for the entire decade of the 1980s. Noteworthy among these data are the 1990-91 totals recorded for juniors, seniors and first-year graduate students; in each case the increase reverses what was a declining trend. The total graduate enrollment continues to increase at a steady pace.

When the data in **Table II** are divided according to the three types of institutions defined in **Table I**, the results are presented as **Table III**. The format of this table shows that

Number of physics departments	171 departments**			575 departments			746 departments		

Includes physics, chemistry, mathematics, etc.

***There are six doctoral-granting institutions that have no undergraduate physics program.*

172 doctoral institutions enroll approximately half of the undergraduate physics majors, thereby spreading the other half among 575 physics departments. The distribution of graduate students is similarly uneven. Master's-granting institutions represent one third of the graduate physics departments, but enroll less than 10% of the graduate physics students.

Introductory physics enrollment.

As colleges compare and re-evaluate their curricula, many of them recognized the need to raise the science requirements in their baccalaureate programs, irrespective of the declared majors. To implement such a change, many institutions turned to their physics departments with the request that they broaden the appeal of their introductory courses. The data in **Table IV** show how diversified was the group of undergraduates enrolled in three levels of introductory physics courses, during the academic year 1990-91.The three levels correspond to the students' mathematical skills. The combined enrollment for that year was 325,000 students. Although the great majority of these students take introductory physics to fulfill a requirement, there are those who choose an introductory physics course as an elective. Thus we find from the three total columns of **Table IV** that engineering majors who took a calculus-based course comprised the largest proportion (26%) of the total enrollment; they are followed by the non-science majors (20%)to whom the non-mathematical courses generally appealed; the health-related majors appear to have preferred the algebra-based courses whereas students interested in the physical sciences or mathematics had the necessary background to enroll in the calculus-based courses. The last two rows of **Table IV** are a further illustration of the uneven distribution of students because one can calculate that 23% of the physics departments enroll 58% of the introductory students.

Undergraduate physics majors.

Taking into consideration the number of required courses, it is essential that the decision to major in physics is made as close to the freshman year as possible. Consequently, chairpersons who monitor the enrollments in lower level physics courses can provide fairly reliable estimates of their prospective physics majors at the freshman and sophomore levels. From the early 1980s on, each fall those estimates ranged from eight to nine thousand freshmen who were sufficiently motivated to express their intentions to major in physics. Traditionally, two-thirds of each class of freshman physics majors sustain their interest in the subject matter over a four-year period while they derive additional encouragement from either the research atmospheres offered at 172 large universities, (see **Table I**) or the intimate environments created by some of the 491 four-year colleges. The resulting annual production of physics bachelors is presented in the first part of **Figure I**.

We present four graduating classes in **Figure II**, starting with the class of 1991 for which we have firm data. This class

Figure II. Actual and projected number of undergraduate physics majors.

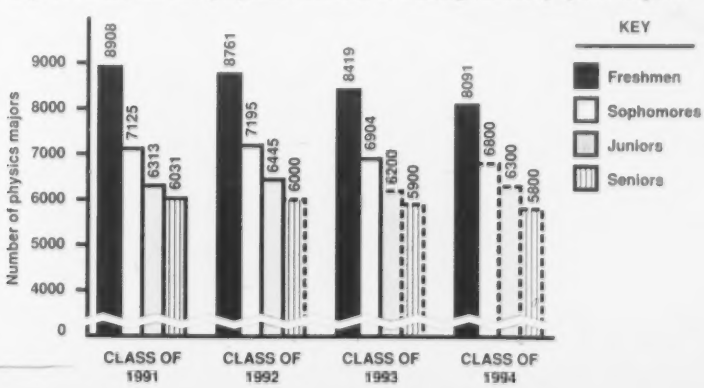

Table V. Attrition of undergraduate physics majors by type of institution, 1978–79 to 1990–91.

Graduating class	Doctoral-granting institution		Master's-granting institution		Bachelor's-granting institution	
	No. of freshmen	% reaching sr. year	No. of freshmen	% reaching sr. year	No. of freshmen	% reaching sr. year
1982	3520	73	1140	63	3410	59

1989	3850	77	1130	70	3670	59
1990	3900	77	1105	67	3700	58
1991	3870	80	1080	70	3800	58

Note: Number of freshmen are based on 3-year averages.

shows a 32% attrition between the 8908 freshmen, estimated by the chairpersons in the fall of 1987, and the 6031 seniors recorded for the academic year 1990-91. The declining trend, formed by the four estimates for successive classes of freshmen, occurred only at the two types of graduate institutions, and is expected to result in lower rates of attrition by the time each class has reached senior status; past studies have shown that smaller numbers of freshmen tend to include a greater proportion of serious students. Thus we project the attrition rates to decline from 32% to 30% and 28% for the classes of 1993 and 1994 respectively.

A composite attrition rate of 32% for the class of 1991 can be shown to range from 20% to 42% depending upon which group of undergraduate physics majors we analyze. **Table V** compares the retention rates of undergraduate physics majors at each of the three types of institutions defined earlier, and shows what changes were recorded in those rates over a ten-year period. For example, PhD-granting institutions not only have the highest retention rates but also the ones that are increasing; and since their collective freshman classes are decreasing, an even higher percentage of freshmen may remain physics majors into the senior year. The lowest retention rate was consistently recorded for the four-year colleges where only 58% reached senior status in the two most recent years. The master's institutions, with the smallest enrollment of physics majors, fall halfway between the retention rates of the other two types of institutions; they too may increase their retention rates as their freshmen decline.

Undergraduate physics programs are offered in all regions of the United States as indicated by the distribution of physics majors in **Table VI**. Since almost half of the physics majors are interested in immediate employment rather than graduate school, approximately one thousand physics majors extend their senior status over more than one year in order to acquire some experience with the job market. This group has doubled since the early 1980s and is presented in **Table VI** under the heading "Fifth-year undergraduates." The lower portion of this table presents the enrollments by type of institution from which the trend data of **Table V** were calculated.

Table VI. Undergraduate physics majors by geographic region and type of institution, 1990–91.

1989–90	1724	1335	3059	43.6
1990–91	1890	1388	3278	42.3

Graduate enrollment.

It appears that the concerted efforts of physics faculty to attract more graduate students who are U.S. citizens may be paying off. The basis for this statement comes from the latest count of U.S. citizens among the entering graduate physics students. After three successive years of gradually declining totals for this group from 1944 to 1724, an increase of almost 10% was recorded for the academic year 1990-91. To put these data into the proper perspective, we present a twelve-year trend in **Table VII** that reflects the dramatic increases in foreign graduate students during the early 1980s. Thus we find that, since 1979-80, the total number of entering graduate students increased by one third, but the number of foreign students almost doubled.

For a more detailed look at the changing graduate enrollment, we present **Table VIII**, which focuses on the study status and citizenship of all level graduate physics students at two types of institutions. The rapid increase in foreign graduate students who entered the U.S. began in the early 1980s and had a different impact on the two types of institutions. For example, foreign students are primarily interested in doctoral programs. The doctoral institutions, with adequate funds for assistantships, continued the custom of choosing the brightest students among their applicants, irrespective of their citizenships; as a result of this practice the proportion of foreign students enrolled in PhD programs climbed from 31% to 43% by 1989. But the number of qualified students with exit visas from mainland China and other Asian countries continued to grow to the extent that it exceeded the number of openings available for them in doctoral programs; this scenario obliged some foreign students to apply for admission to master's institutions with the intention of transferring to a doctoral institution after one or two years.

Although there are 84 physics master's institutions in the U.S., not all of them are in a position to attract foreign students. For example, one group of institutions offers only late afternoon or evening classes to part-time students who are full-time employees of industrial companies and they have little or no financial support for their graduate students. Another group of master's institutions offers day-time classes and has teaching assistantships that can be offered to foreign students who depend on financial support from their graduate schools because their visas do not permit them to hold off-campus positions. The right-hand portion of **Table VIII** includes data from all 84 master's institutions and appears to indicate a leveling of the percentages the foreign enrollment represents.

Table VIII. Full-time, part-time, and foreign graduate physics enrollments by type of institution, 1981 to 1991.

For information on how many teaching assistantships are available and what proportion of them is held by foreign graduate students, we present **Table IX** which also gives a geographic distribution of these sources of support.

Degrees granted.

Although the demand for projections remains high, the increasingly diversified backgrounds of physics doctoral candidates makes it more difficult to project the number of degree recipients for future years. For example, in past years we found a high correlation between the first-year graduate students at PhD-granting institutions and the number of doctorates granted five years later. But this formula makes no allowance for foreign students who enter doctoral programs with advanced standing either from a master's granting institution or from a foreign university. On the other hand, the number of years required to complete a doctorate has gradually increased. Thus an adjustment in our projection method was called for that yielded the trend presented in **Figure III**. Starting with the doctorates granted in 1980-81, we show the actual data through 1989-90. The five years of data we project consist of two increases to 1260 doctorates by 1992 followed by a decline to 1200 for the class of 1994 and a subsequent increase in 1995 to 1275 physics doctorates.

Figure III. Actual and projected number of physics doctorates granted, 1980 to 1995.

**Institution type indicates the highest physics degree offered; type I = Bachelor's degree, type II = Master's degree, type III = Doctorate.*
***See Table IX for explanation of geographic region.*

A geographic distribution of the four types of physics degrees granted in 1989-90 is presented in **Table X**, by type of institution. Transfer students were mentioned in connection with **Table VIII**, but it is **Table X** that offers some detail on the size of that group of students. For example, the fourth column of data indicates that 170 students needed to transfer from the master's institutions in order to pursue their doctoral studies. The 6% increase in doctorates granted over the previous year appears to be well distributed among the nine regions.

Minority groups are defined as those who have a small but notable representation among the physics graduates, a definition that clearly applies to women who are granted physics degrees. The first column of data in **Table XI** indicates the number of women, both U.S. and foreign, among each of the four groups of degree recipients. The number of graduate degrees conferred increased over the previous year and so did the number of women among them; however, a bare majority (54%) of the 109 women doctorate recipients are foreign citizens. The fastest growing group among the six groups listed in **Table XI** are foreign Orientals who continue to come to the U.S. as graduate physics students. The decline in U.S. blacks at the bachelor's level is entirely attributable to the men.

Table XI. Number of physics degrees granted by sex and minority group* status and citizenship, 1989–90.

Type of degrees	Sex	Total no. of degrees	Black		Native American Indian	Hispanic		Oriental		Asian Indian		Arab	
			U.S.	Foreign		U.S.	Foreign	U.S.	Foreign	U.S.	Foreign	U.S.	Foreign

	Total	1183	5	5	–	4	17	29	250	6	83	–	23

**Minorities in AIP surveys are defined as groups with a low representation in the physics community, but one whose participation has aroused considerable interest.*

ASTRONOMY

Table XII. Trend in astronomy enrollments* and degrees, 1981 to 1991.

Academic year	No. of astronomy degrees granted (July 1 to June 30)				Undergraduate astronomy major enrollments		Graduate astronomy enrollments	
	Bachelor's	Master's enroute	Terminal master's	Doctor's	Juniors	Seniors	Total	1st year
1981–82	181	54	15	70	252	224	647	142
1982–83	138	61	22	81	274	232	670	178
1983–84	137	51	22	74	242	217	688	154
1984–85	145	56	16	66	239	212	716	151
1985–86	169	61	24	86	232	252	711	170
1986–87	172	38	23	72	268	255	755	173
1987–88	181	51	24	94	250	285	731	171
1988–89	196	77	16	94	213	275	780	169
1989–90	176	77	17	89	223	200	842	186
1990–91					312	218	880	192

**Includes part-time students.*

Astronomy departments are divided into two groups, the separate ones and those that are combined with physics departments. The trend data shown in **Table XII** represents a 100% response from all 65 astronomy departments. A similar situation to that described in connection with the physics majors exists among the astronomy undergraduates where a growing number of them extend their senior status over more than one year. In 1989-90 we began to subtract the fifth-year seniors, and hence the trend data reflect a substantial decrease for that year.

The format of **Table XIII** has been revised to include the fifth-year undergraduates and divide the graduate students on the basis of citizenship. By showing the contributions from the two types of astronomy departments referred to above, we find that the separate doctoral departments continue to play the biggest role in educating astronomers.

This report was prepared with the help of Thomas N. Stovall.

Table XIII. Astronomy enrollments 1990–91 and degrees 1989–90 by type of institution.

DATA ON PHYSICS ENROLLMENTS AND DEGREES

a SUPPLEMENT

The detailed data from the annual survey of Enrollments and Degrees are presented in this supplement. The 1989-90 physics degrees and the 1990-91 physics enrollments are listed for each of the 747 physics-degree-granting colleges and universities in the United States. Institutions are listed alphabetically by state. The data shown for each institution consist of undergraduate physics majors, full-time and part-time graduate students, first-year graduate students and physics degrees granted at all levels. All freshman and sophomore enrollments are estimated by the department chairpersons. Numbers shown in brackets are estimates based on data supplied by that institution in an earlier year.

Notations used in this supplement are:

* Institution grants master's degree as its highest physics degree. (N=84)

** Institution grants doctorate as its highest physics degree. (N=172)

1 No undergraduate degree program in physics.

DATA ON ASTRONOMY ENROLLMENTS AND DEGREES

This supplement is an institutional listing of the 65 degree-granting astronomy/astrophysics departments in the U.S., 26 of which are combined physics and astronomy departments. The institutions are listed in alphabetic order by state. For each institution the 1989-90 degrees and the 1990-91 enrollments are given.

Notations used in this supplement are:

C	Combined physics and astronomy department.
S	Separate astronomy department.
*	Institution grants master's degree as its highest astronomy degree.
**	Institution grants doctorate as its highest astronomy degree.
1	No undergraduate degree program in astronomy.

Member Societies: The American Physical Society • Optical Society of America • Acoustical Society of America • The Society of Rheology • American Association of Physics Teachers
American Crystallographic Association • American Astronomical Society • American Association of Physicists in Medicine • American Vacuum Society • American Geophysical Union
